Bootup Hackathon

Project name – Click Simple

Members – 1. Kshitiz Sharma

2. Priyal Chandeshwar

3. Aarush Sripathi

4. Anik Raj

Why We Decided to Make ClickSimple?

In today's digital world, websites and online platforms have become gateways to essential services and opportunities. From booking doctor's appointments and managing finances to accessing government schemes, paying utility bills, and planning travel, our daily lives increasingly depend on digital platforms.

However, not everyone experiences this convenience. Many users, including our parents and grandparents, struggle with complex interfaces, unfamiliar terminology, and language barriers. What seems like a simple task to some can become a source of stress, frustration, and helplessness for others. Watching a loved one repeatedly ask for assistance just to complete a basic online process highlights a growing digital divide.

When we explored the hackathon challenge, **"Turn Interfaces Into Guided Tasks,"** we saw an opportunity to address this problem. Rather than expecting users to adapt to complex interfaces, we wanted to create a solution that adapts to users and guides them through tasks.

This led to the creation of **ClickSimple**, a browser extension that acts as a real-time digital assistant for website users. It helps users find information, complete forms, navigate pages, and understand the steps needed to accomplish specific tasks. Unlike traditional help pages or chatbots, ClickSimple provides **context-aware guidance directly within the webpage**, offering assistance exactly when it is needed.

We chose a browser extension because it integrates seamlessly into the user's browsing experience, providing support without requiring users to switch to another application or website supports in local languages alllowing users to receive guidance in the language they are most comfortable with. In preliminary testing, users were able to complete tasks with fewer errors and reduced assistance compared to navigating independently.

At its core, ClickSimple is built on a simple belief: **technology should be accessible to everyone, regardless of age, technical expertise, or language.** By transforming complex interfaces into guided, user-friendly experiences, ClickSimple empowers users to navigate the digital world with confidence, independence, and ease.
